

Instructions on how to run analysis_pcap_tcp.py

In the directory where the program file is located, in the terminal type the following:

```
python file_name.py pcap_file_name.pcap sender_ip receiver_ip
```

The first argument is the program file. The second argument is the pcap file. The third argument is the sender ip. The fourth argument is the receiver ip.

An example:

```
python analysis_pcap_tcp.py assignment2.pcap 130.245.145.12 128.208.2.198
```
